

Project services

As project managers we believe

With years of experience in the Information Technology fields in both client and vendor companies across a number disciplines we are well placed to tackle complex projects and deliver on time and to budget. Our experience spans customer service, technical support, marketing support, Project and Programme Management, sales and sales management directly associated with IT&T. This includes Telecommunications (Voice and Data), Systems Integration, Client/Server Application Development, Software Testing, Software Development, Performance Analysis and Tuning.

We have a keen technical understanding of technology and how it translates into business functionality. We believe implicitly in offering professional representation with well thought out solutions and strategies. Highly analytical and open to ideas that will improve or enhance performance, we are able to accurately assess user and company requirements and quickly effect the necessary architecture or process changes to meet challenges both cost effectively and within agreed time frames.

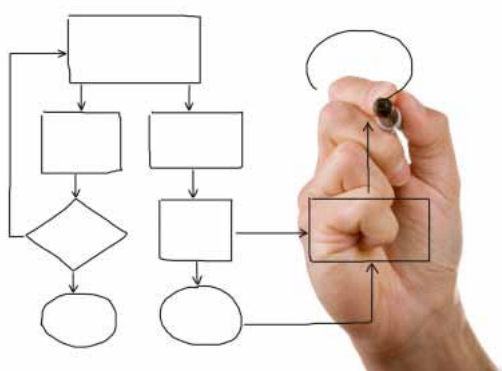

We can help you

With a balanced and long-term view of how best to exploit technology to meet and contribute to business drivers, we are committed to the on-going planning, strategy and vision which are key to enduring success and can motivate, cajole and enthuse team members to focus on delivery, underpinned by sound methodologies. We can:

- Head large teams delivering complex projects.
 - Offer technical competence spanning a variety of technologies.
 - Manage diverse groups of people.
 - Project recovery.
 - Form and retain skilled and motivated project and development teams.
 - Work in highly politicised environments with significant level of scrutiny.
 - Understand and work with complex stakeholder structures, representing different, and at times opposing, values, accross multiple organisations.
 - Report to, and solicit input from, steering committees and specialist advisory groups.
- Provide a demonstrated understanding of budgeting and financial management.
